FOREWORD

The government of Ethiopia (GoE) produces “Homegrown Economic Reform Agenda”, whereby the digital sector is identified as a source of growth. Consecutively, based on the “Homegrown Economy Reform Agenda” the “Digital Ethiopia 2025” is designed to build digital economy.

The Ministry of Innovation and Technology (MInT), with reference to the Science, Technology and Innovation policy (STI 2022, updated), is working with relevant stakeholders to promote export of digital products and services which have high impact on the Ethiopian economy.

While enabling the legal framework to attract investments in the areas of Science, Technology and Innovation, the Council of Ministers approved the Investment Incentive Regulation which puts various incentive mechanisms to attract more investment in the ICT sector.

The IT/ BPO sector in the country is has been vastly growing in the recent years and recognizing this growth and the impact in the growth of the country’s economy, the Government of Ethiopia (GoE) is working tirelessly to enable the operating environment of the ICT sector, IT enabled service/ BPO, data center services, and blockchain processes and other related services are expected to boost in Ethiopia. These technologies have enormous potential to contribute to the Digital Economy by increasing foreign currency, transfer of knowledge/technology, and creating jobs.

Support from organizations like the UN ITC through is NTF - V program is vital at this crucial time and efforts such as this BPO Directory which introduces different organizations from the country’s growing BPO industry is commendable. The ministry is open for a continued partnership with ICT and I highly believe that it will contribute to the ongoing efforts of the Government of Ethiopia.

**Belete Molla (PhD),
Minister, Ministry of Innovation and Technology
Ethiopia**

FOREWORD

The Ministry of Labor and Skills was established in September, 2021 to transform the national labor market and the skills development landscape of Ethiopia in general. The MoLS works to mobilize resources and innovative investments that support start-ups, enterprises and job creation programs and works to enable the training and education sector to produce qualified TVET graduates with skills and ethics that fits into the labor market. Furthermore, the ministry has taken on mandates previously assigned to the Jobs Creation Commission, the Ministry of Labor and Social Affairs, and the Federal Technical and Vocational Training Agency (TVET).

Sustainable job creation and youth employment are critical challenges that Ethiopia is facing today, as the Country aims to transition to a middle-income country by 2025. With about 2 million new entrants to the labor market every year, 49% of employed population being in subsistence employment, and ~70% of the population under 29 years old, a concentrated effort to grow current jobs, create new jobs, improve the quality of these jobs and the inclusiveness of the labor market are necessary. To this end, the MoLS has identified several areas of intervention for digital entrepreneurship in its Plan of Action from a Policy, Talent and Technology standpoint. These interventions are paving the way for a Digital Economy. Commendable progress has been made on building a startup ecosystem and encouraging digital entrepreneurship in Ethiopia.

Exporting services such as transport, tourism, financial and insurance service has been at the heart of Ethiopia's economy for decades and likewise the growing population is keen to explore exporting labor service by outsourcing to different sectors of the domestic and international market. This will contribute to the growth of the National Economy as well as broaden the job market by creating employment opportunities. As with the other NTF V project activities, the ministry appreciates this directory as it will contribute to the promotion of sector development and the creation of sustainable jobs in the field of digital technologies. The ministry also acknowledges the effort put forth by the NTF-V Ethiopia project, which is managed by the UN International Trade Center here, and it welcomes a robust and ongoing partnership.

**H.E Ato Nigussu Tilahun,
State minister at the Ministry of Labor and Skills
Ethiopia**

FOREWORD

Ethiopia has an opportunity to leverage its demographic shift and provide increased off-shoring and outsourcing services for the world. Besides the demographic shift, other factors support this development including proximity to potential partners and markets, availability of trained engineering graduates, competitive cost structure for power and electricity, shifting policy support focus from government, emergence of other global trends in digitization, multi/near sourcing, and coordination of efforts by industry actors locally.

ICTET as an association has been exposing, engaging, and enabling the private sector in the ICT Industry in Ethiopia for over a decade. Among other things, it has contributed towards the development of the Digital Ethiopia 2025 strategy, which has among its identified pathways of development for the country- the expansion of the IT Enabled Services Sector, of which off-shoring/outsourcing/knowledge sourcing forms an important part. The association's prior work has also laid the foundation for the growth of the ICT sector more broadly and facilitated cooperation by stakeholders to promote IT services exports.

It is in that light that we welcome the support of NTF V's effort to connect yet more companies to the export markets in BPO and related services. The sector, although at a nascent stage in Ethiopia, has promise. To seize on the opportunities BPO provides and make compelling value proposition for potential customers, Ethiopian firms and partners need to continuously solve problems for now and the future.

We live now in an era of ever greater task automation (think ChatGPT)- so moving up the task complexity ladder in a timely manner will be important, niche capabilities will be important, market diversification will be important, building a learning culture among companies, regulators, and partners will be important. In all of these areas ICTET is prepared to contribute so Digital Trade in Services continues to grow and make a positive impact to wellbeing here in Ethiopia and internationally. Come work with us to (Out) Source from the Origins.

**Yilkal Abate,
President, ICTET**

FOREWORD

On a quest to become the new global outsourcing destination, the private and public sectors of Ethiopia have made it a mission to create a hospitable environment for ICT and other outsourcing sectors. Business process outsourcing and promotion of IT-enabled services are one of the highest strategic priorities of the government.

Reliable internet, vast talent pool, timezone advantage against parallel markets, highly qualified youth and conducive policy are some of the reasons that make Ethiopia a contender to be the next African tech talent hub. Today here in Ethiopia, there are several companies that deal with this expanding sector as the international community has recently started seeing the value of outsourcing to Ethiopia.

The Ethiopian outsourcing association's primary goal is to promote Ethiopia as an outsourcing destination while working closely with policymakers to create an even more conducive environment for the outsourcing industry to thrive and create a national impact. Members of the association are pioneers in the industry, creating decent jobs for Ethiopian youth while serving the global market with diligence. With the country going through an immense digital transformation and the presence of outsourcing firms that has proven competencies in AI data training, software development, customer contact center, big data, content creation and more, there was never a better time to outsource to Ethiopia

Wondwesen Zewdie,
President: Ethiopian outsourcing association

FOREWORD

As part of their rightshoring strategies, Fortune 500's and multinationals have developed a knee-jerk reaction relocating their middle and back-office processes to India, the Philippines, Eastern Europe, North Africa, and Central America.

But as labor cost continues to rise in those parts of the world, some African countries are emerging as alternative destinations, especially due to labor cost arbitrage and the high availability of trainable talent.

Laurendeau & Associates (L&A) has been at the forefront of setting up a strategy for Ethiopia to become an offshoring hub and promote it globally as such.

Moreover, Outsourcing is an area that has the capacity to lift other related sectors such as Freelancing and the Gig economy. Hence, L&A proposed a FROG - Freelancing, Outsourcing, Gig- Economy strategy to the Ministry of Labor and Skills and in the process a FROG community was established.

Today, the community represents a whole ecosystem of companies interwoven and interlinked with each other.

The future of work is already here in Ethiopia, and it is expected to grow fast.

**Bernard Laurendeau,
The Freelancing, Outsourcing, Gigs (FROG) Community
Ethiopia**

FOREWORD

Netherlands Trust Fund V - NTF V

The International Trade Centre's Netherlands Trust Fund V (NTF V) is a four-year partnership (July 2021- June 2025) signed by the Ministry of Foreign Affairs of The Netherlands and the International Trade Centre to support micro, small and medium-sized Enterprises (MSMEs) in the digital technologies and agribusiness sectors.

The programme includes both sectors in Ethiopia, Ghana, Senegal, and the digital technologies sector in a multi-country project in Benin, Cote d'Ivoire, Mali and Uganda. As with previous NTF programmes, NTF V will be jointly implemented with the Dutch Centre for the promotion of exports from developing countries (CBI). In Ethiopia, the NTF V Project aims at strengthening tech startups and IT & BPO MSMEs, and seeks to influence policy makers and regulators, Trade and Investment Support Institutions and private business support providers, as well as international private sector partners in creating a supportive environment for enterprises in the IT and IT Enabled Services sector.

In the digital technology sector, our trade-related technical support is three-fold:

At the policy level: we provide assistance in the development or improvement of public policies and sectoral regulations, with private-sector representatives

At the institutional level: we work with digital business associations and tech hubs to increase their sustainability and impact

At the start-up and MSME level: we develop market access and linkages, and build international competitiveness

www.intracen.org

FOREWORD

The Ministry of Foreign Affairs of the Netherlands - Sustainable Economic Development Department

The Ministry of Foreign Affairs of the Netherlands (MFA) promotes sustainable and inclusive economic growth in developing countries by helping to improve the business climate and stimulating enterprise. It also enhances sustainable trade with developing countries and supports the construction of good roads, ports and power supply systems. Trade unions, employers' organisations and farmers' cooperatives in developing countries receive support to improve the services they provide to their members. MFA helps local authorities to collect taxes effectively and transparently. It also provides finance for businesses in developing countries and supports Dutch companies that produce innovative solutions to local challenges.

Africa

Africa's Information Services Solution

Infomoby / Africa118

Africa 118 was founded in 2010 to solve a critical information gap: 85% of mobile customers surveyed in a major African city claimed to have difficulty finding accurate information for the local businesses and services they were looking for. Furthermore, less than 5% of the businesses we surveyed had any online presence making it difficult for them to be found. We have developed world-class solutions for both consumers and local businesses to solve these problems.
