West-African Tech

IT and BPO Company Directory 2022

The West Africa Competitiveness Programme (WACOMP)
IT and BPO sector

WACOMP

The West Africa Competitiveness Programme
FOREWORD OF THE EUROPEAN UNION

We are happy and proud to see the results of our support to the region manifested in this IT and BPO Company Directory 2022 covering the 16 countries of ECOWAS and Mauritania.

As our outmost priority is to support the region in its efforts to boost economic integration and growth, and create jobs, especially for the youth, making the most of the countries' demographic dividend, we are particularly glad to see 95% of applicants for the Directory to be under 35 years old. Similarly, the 40% of women applicants testifies to the potential the region can tap into in supporting women owned and managed businesses.

While many of the 208 companies that applied to the project are linked to the more traditional agriculture and food sector, this Directory also demonstrates that the region has much more to offer in terms of digitalisation, innovation, creativity and advanced technology. This is demonstrated by the number of applicants stemming from the fashion and interior design, IT, fintech and similar fields.

Our West Africa Competitiveness Programme (WACOMP) in partnership with the ECOWAS Commission, the countries of the region, and the two implementing partners, the ITC and UNIDO, under which the Directory has been produced, prioritised the ICT sector as one of a significant development potential in its own right as a value chain, as well as a transversal enabler for the other sectors. Alongside the ICT, WACOMP is also focussing on mango and cassava agri-value chains, and textiles and garments value chain, at the regional level, as well as many other prioritised by the individual countries.

I would like to thank the ITC and our other WACOMP partners for providing support to all these front-runner entrepreneurs in taking their businesses to the next level, and I wish them all further success!

Ms. Cecile Tassin-Pelzer
Head of Cooperation, European Union Delegation to Nigeria and ECOWAS

FOREWORD OF THE ECOWAS COMMISSION

The Directory of Information and Communication Technology (ICT) companies in West Africa is developed with the support of the International Trade Centre (ITC) in the framework of the West Africa Competitiveness Programme (WACOMP) funded by the European Union and led by the Economic Community of West African States (ECOWAS), in collaboration with the West African Economic and Monetary Union (UEMOA).

This Directory is the result of a long process which started in 2019 aiming at providing information on enterprises involved in the ICT sector, the building blocks of an ecosystem using technologies as bridge and key driver for economic transformation.

It is a window through which the rest of the world can discover the potential of companies in the ICT value chain in West Africa.

The development of the said business directory is in line with the ECOWAS Commission’s Vision 2050 in that it contributes to promoting the development of digital entrepreneurship, supporting the industrialisation of the region, increasing employment opportunities and productivity and encouraging the digital transformation of economies.

The ECOWAS Commission welcomes the initiative and congratulates all those who supported the publication of this first edition of the West African ICT Business Directory and reaffirms its commitment to the promotion of digitalization. To this end, it encourages the public to make good use of it.

H.E.M. Mamadou TRAORE
Commissioner Industry and Private Sector Promotion
ECOWAS Commission
The International Trade Centre (ITC) is the joint agency of the World Trade Organization and the United Nations. It is the only development agency that is fully dedicated to supporting the internationalization of Micro, Small and Medium Enterprises Development (MSMEs). This means that the agency enables SMEs in developing and transition economies to become more competitive and connect to international markets for trade and investment, thus raising incomes and creating job opportunities, especially for women, young people, and poor communities.

ITC works closely with governments as well as institutional and private sector partners in developing countries across its six focus areas:

1. Providing Trade and Market Intelligence.
5. Promoting and Mainstreaming Inclusive and Green Trade.
6. Supporting Regional Economic Integration and South-South Links.

ITC’s mission is to foster inclusive and sustainable economic development, and contribute to achieving the United Nations Global Goals for Sustainable Development. ITC works towards creating ‘trade impact for good’.

The West Africa Competitiveness Programme (WACOMP)

The West Africa Competitiveness Programme (WACOMP), funded by the European Union, aims to support several selected value chains at the national and regional level in order to promote structural transformation and better access to regional and international markets while taking into account social and environmental concerns. The Programme was adopted under the 11th European Union Development Fund (EDF) Regional Indicative Programme for a total amount of €120m.

The major objectives of the programme are to strengthen the competitiveness of West African countries and enhance their integration into the regional and international trading system. To reach this overarching goal, the programme will work to:

• improve performance, growth and contribution to the industry,
• regional trade and exports of selected value chains,
• and improve the business climate at national and regional levels.

The programme, which is aligned to support the implementation of the West African regional policies and programmes, including the West Africa Common Industrial Policy (WACIP), West Africa Quality System Programme (WASPQ) and ECOWAS Private Sector Development Strategy, will be instrumental in creating the foundations and promoting access of West African countries to the EU External Investment Plan (EIP).

The Programme has 16 National components and 1 regional component. Each country is individually responsible for the implementation of its component and the ECOWAS Commission, with the support of the West Africa Economic and Monetary Union (WAEMU/ UEMOA) Commission, is responsible for the implementation of the regional components and for the coordination of the programme through a programme overall steering committee to be convened once every year. A number of technical partners will support implementation at the country and regional levels.

Out of the 341 applications received by the International Trade Centre in response to the WACOMP IT and BPO and tech startups call for applications, 208 companies were considered eligible, having headquarters in one of the ECOWAS/UEMOA countries and Mauritania. The following analysis builds on the data provided through the applications from the 208 eligible companies:

Top 5 countries of applicants
1. Nigeria: 59
2. Mali: 31
3. Benin: 30
4. Ivory Coast: 25
5. Ghana: 14
6. Others: 49

Top 4 areas of expertise
- IT companies (software web development including)
- Others (fintech, EdTech, smart city…)
- Agritech & Foodtech
- Tech applied to Fashion, textile & Interior Design/Lifestyle

Applicants under 35 years-old: 95%
Women Owned/Managed businesses: 40%
Exporting: 39%

The International Trade Centre together with its partners carefully selected 60 IT companies in the ECOWAS countries and Mauritania to feature in this WACOMP IT and BPO directory.
GLANCE OF THE ICT INDUSTRY IN THE ECOWAS REGION:

As a rapidly growing sector, global ICT spending is expected to rise by almost a trillion US dollars from USD 4.92 trillion to USD 5.82 trillion in 2023. This trend is expected to be mirrored in Africa and the ECOWAS sub-region as a growing, young, entrepreneurial middle class are expected to drive demand for ICT goods and services.

Globally, services industries are among those that have significantly benefitted from advancements in ICT. Statistics indicate that the revenue for the overall services industries among selected ECOWAS states has shown a long-term trend in growth (see figure 1).

The ECOWAS Commission has identified BPO as a strategic competitive sector for several of their member states, including Cape Verde, Ghana, Nigeria, and Senegal. Besides generic business processes that can be outsourced to third party BPO service providers, there are also other sector-specific uses for ICT that have been gaining momentum both globally as well as in the ECOWAS sub-region.

In Africa and the ECOWAS sub-regions, ICT has been playing a major role in promoting financial inclusion. Mobile money has contributed significantly towards helping to provide access to financial services for the previously unbanked in West Africa, as per the World Bank's global financial index. One example of a company that has experienced success offering such services in Africa is Nigeria’s Paystack – which has now expanded to other countries in Africa and elsewhere.

E-commerce is another example that has experienced a significant growth. E-commerce activities are also developing through social media or through Fintech companies specialized in online payment infrastructure. Figure 2 shows the growth of revenue through e-commerce since 2017, and a projection of the growth trend until 2024, also indicating that growth is anticipated for all product categories.

As a rapidly growing sector, global ICT spending is expected to rise by almost a trillion US dollars from USD 4.92 trillion to USD 5.82 trillion in 2023. This trend is expected to be mirrored in Africa and the ECOWAS sub-region as a growing, young, entrepreneurial middle class are expected to drive demand for ICT goods and services.

Finally, e-health or digital health also sits in a similar position where the sector is still in its infancy, yet there is potential for growth. It is a sector which has attracted a lot of attention in recent years. Examples include telemedicine where consultation and diagnosis may be done via a digital communication link to use drones to deliver drugs to remote areas.

Maintaining this momentum can be achieved by continuing to enable and promote the overall service export industry with the necessary investment, infrastructure and effective policy. This is particularly the case given the upward trend in global spending on service imports, which has tripled in less than two decades. In addition, global spending on service imports, is expected to rebound from a dip in 2020, which can largely be attributed to the global covid-19 pandemic. As a result, greater revenue can be expected from the industry, and ECOWAS states would do well to position themselves in order to capture their share of this growing value.

TIC TOGO is an IT company specialized in communication and digital transformation. TIC TOGO today supports young companies in their digital communication, namely:

1. Making websites and applications available to them at a lower cost
2. Providing them with digital communication services so that they can be more visible and credible
3. Providing them with an e-commerce platform www.assivito.com free of charge for the sale and promotion of their products and services etc. We also provide training and cybersecurity services.
